QUESTION

“Will the Freedom Commissioner look into claims of people being impacted by man made electromagnetic radiation from digital communications and will he support the establishment of white zones (no Radiofrequency transmitters) for people who find themselves disabled and unable to tolerate emissions from cell towers, NBN WiMax towers, WiFi etc? In today's technological driven and wireless addicted society we find there are people who are really suffering from these ubiquitous emissions from wireless emitters sited near our homes, near and in schools, on our hospitals and in public places. Those who are impacted are being ignored by the Government, labelled and ridiculed, effectively having their freedoms and rights being trampled. Sufferers lack accessibility to a safe environment which can lead to discriminatory behaviour. To date there has been a lack of real objective health based research to look at what the potential implications are to chronic long term exposure to these wireless signals that have been classified by the World Health Organisation as potentially carcinogenic. We require scientists with biological and medical science credentials to investigate, not psychologists or physicists as is happening today. Technical studies looking at emission levels against an RF standard are of little value when it comes to trying to understand whether there are health impacts to RF exposure. ”

Anyone care to return home to intense INCOMING high frequency tonight? 2 & 1/2 years of high frequency, amongst other effects. Forced from one home and now forced from my new home. Smart meter pulsing and throbbing waves, a bed of nails implanted in the brain. 4G towers impacting on front & rear of house, & Wifi, ringing in the brain, complete microwave hearing, radiowave illness, head and nose at the point of exploding from pressure, furry swollen tongue, burning through the roof of the mouth, rapidly multiplying lumps in my gums. Safe standards? What a joke. If our standards were 'safe' then it wouldn't be possible to illicit such a biological reaction. As I repeatedly said in 2014, I'm not capable of self-combusting. I encourage the development of an exclusively independent body to measure EMR and the development of a white zone for the electrically harmed.

ARPANSA, Powercos, Telcos, if this is so safe, if these are the correct Australian standards I'm living (dying) in, then put your money where your mouth is, BRING YOUR WIFE, AND your CHILDREN AND your PETS, AND STAY IN MY HOME. This is a genuine offer!! It ain't safe, 'MATE!' Go on ARPANSA, PROVE ME WRONG... Set up your equipment, monitor it 24/7. Is anyone able to provide me with evidence that smartmeters are safe? How about mobile towers? Earthing plates buzz madly as the towers strike. I'm set to record it for prosperity. I'm over the homelessness, the extreme harm, the fleeing, and when not one authority will simply step up, come out AND FIX IT. FOR SALE: MY HOUSE. AGAIN. Good on you. Thanks for the 2 and 1/2 years of EMR/EMF terror.

---

Electrohypersensitivity has been upgraded to "subtle electrocution". You are NOT sensitive .... you are being electrically induced. Pls see Curtis Bennett's response to the episode of "the Drum" featuring Dr Rodney Croft below. Veronica all these RF do NOT fall within the standards ..... the SAR (Specific Absorption rate) per kg of body weight does NOT include ANY antennae, etc. This is NOT a safety test. There is no need for research at all. Causation is simple 'electricity' .. OHM'S LAW .... your bio-electrical system... your body is being assaulted.

---

The common fallback position of telecommunications corporations and energy corporations imposing high frequency transmissions on the entire community without choice is that products and technology used fall within Australian standards. When put to those corporations that those standards are irrelevant to people whom are hypersensitive, they fail to address the fact that their blanket approach supported by Australian and State/Territory governments are rendering people extremely unwell. Consequences include inability to work, need to relocate and live in isolation and, in some cases, homelessness - all often without notice due to the erection of infrastructure on public land without consultation or reasonable accommodation of safety issues. The flow-on consequences have a massive impact on government funding due to increased reliance on services by people with illness that could be otherwise avoided, if the Australian Government took this issue seriously and caught up with a number of other countries which recognise this as a valid and significant health issue (such as a number of European countries and Canada).

Veronica Lever-Shaw · 1 year ago

I can filter my water from fluoride. I can choose not to vaccinate. But I CANNOT ESCAPE the microwaves ('EMF') that have destroyed the health of me and my family and friends. The radiation from unchecked proliferation of microwave devices – cell masts, smart meters, wifi, etc – is now 1 million BILLION times that of the previous generation. EMF is invisible and as such the most INSIDIOUS, DEADLY, SILENT, MISUNDERSTOOD, HUMAN RIGHTS VIOLATION. It violates our right to health and freedom of movement, amongst others. EMF erodes the health of the entire population – and goes undetected. How does it do this? There is a FULL SPECTRUM of illness ranging from nerve and muscle pain and joint pain, CFS, thyroid problems - a myriad of health issues - all the way though to the most devastating cancer. Having no illness signature in and of itself, but affecting every organ and system in the body, EMF is largely IGNORED. EMF is EVER INCREASING. At first, EMF causes illness that is label-less, and then, as EMF continues its domino effect and breaks down DNA, diseases are identified. Diseases that were once rare - but that are now commonplace, on the rise, and found in younger and younger people: diseases of the heart, eyes, ears, thyroid/endocrine, diabetes, fibromyalgia, Alzheimer's, dementia, diabetes, MS, ADHD, Autism, a plethora of neurological diseases, and cancers of every type. The cost to the individual, the family, society, and economy is enormous. The escalating health costs are an unsustainable burden on the individual and society - EMF is not only devastating lives – EMF is devastating the economy.

Karen Adler · 1 year ago

I agree, we have choice in many things, however trying to escape electromagnetic frequencies (emf) is proving difficult. My family fled from Sydney after being diagnosed with electrohypersensitivity syndrome, which is like an allergy to EMF. The kids would come home from the school which was surrounded by 3 cell masts, with migraines. Living in close proximity to others with wifi and wireless devices gave us heart palpitations, tinnitus, nerve pain, achey eyes and migraines. We are healthy and pain free when we are not exposed to these wireless devices and cell masts. This is why we moved to the country. We are forced to live like hermits and unable to be part of the community due to our sensitivity around EMF. Our human rights have been abolished as we cannot escape the radiation that is forced on us. We need to adopt the “precautionary principal”— erring on the side of caution when there’s no evidence of safety. Meanwhile the telecom industry is operating with the assumption that with Wi-Fi there’s no proof of harm. Yet, we have a lot of evidence that these frequencies do in fact affect the human body. We already know, for example, that radiation generated by cell phones penetrates the less protected, and still developing, brain of a child to a much greater degree than it does an adult. We also have research that shows cell phone bases provoke cardiac arrhythmias. Plus, the studies continue to roll in. To make matters worse, school Wi-Fi systems are industrial strength compared to those in homes: they are so much stronger! Routers mounted in hallways and other locations can blast that signal through as much as 18 inches of cinderblock. Dr Mallery-Blythe states Estimates for the number of people with EHS vary widely, but several countries report around 4-10%. In the UK this corresponds to approximately 2.5 to 6.3 million (which is more than the number of UK wheelchair users). This is likely to be a gross underestimation given that figures are based on the number of people who have made the connection between their symptoms and EMF exposure. The number of people who have mild EHS symptoms, but have not linked them yet to exposure would be far higher. Given the ubiquity of exposure now in all environments, it can be very difficult for people to notice the association.

The insidious campaign to force these toxic smart meters upon every man woman and child in Victoria has not ceased. The truth is that it is still going on full bore. Let me say this. No one and I mean no one in Victoria has been "allowed" to retain their old meters. Some may say that they have been allowed to retain theirs. That is incorrect. It has never been acknowledged by the Vic Govt or the distributors that people have been allowed to keep their meters and allowed to have manual metering. The way it works is like this. The government and the distributors have come up with an incriminating and defamatory expression to brand those people as "those that continue to refuse a smart meter". Yes, you are a "refusenik". You are they which have "refused". The word "refuser" is incriminating. You are still in possession of your meter only because you are a "refuser". The distribution companies don't seem to have any interest in maintaining any manual metering equipment. They are only interested in forcing their accursed "smart meter" upon customers requiring maintenance to their equipment. They are holding to ransom those customers that have retained possession of their safe manual metering meters. The following excerpt is contained in the Energy and Water Ombudsman's (EWOV) website in respect to the controversial manual metering fee. "The fee will continue to be in place UNTIL THE DISTRIBUTOR IS ABLE TO INSTALL THE SMART METER AT THE PREMISES". So your choice to remain safe and to protect your loved ones has not been respected at all. You are a "refuser" and EWOV is part of that conspiracy to hold you to ransom. "Those that have continued to refuse" is the means used by which the government and the distribution companies to not have to acknowledge and rights that we have and to allow them to continue to pursue this wicked agenda to force these toxic radiation transmitting devices upon everyone including the "refuseniks".

Bill Nolan · 1 year ago

Human Rights Commissioner Tim Wilson, Curtis Bennett has responded to the mass subtle electrocution of Australians through the "wireless grid" ...includes, cell phones, routers, ipads, laptops, smart meters, cell towers, DECT phones, baby monitors etc ...any microwave (wireless radiation) "at school should cease immediately and be replaced with safer, faster and more secure access to the Internet. This must stop immediately to reinstate the Rights of the Child.....safety of children comes before education and our children are at serious health risk. WE need a Commission Of Inquiry into "WHY" the deregulation of the Telecommunications industry allowed "an uninsulated electrical system" that is destroying, killing and damaging Australians.....Pls read Curtis article for the "science" and please contact him personally. he is happy to explain the danger and science and the remedial immediate action that needs implementation It is scientifically shameful to hear Professor Rodney Croft from Center For Electromagnetic Bioeffects Research and I say it without malice. Sciences compliment each other and professionals should never speak over their area of expertise. This Episode is the perfect example of what happens when professionals across the board don't do their jobs including the media producing the episode. When you look at the website of the Center of Electromagnetic Bioeffects Research, you can read about the intent of their work and the wide scope of science professionals working with them.

<http://acebr.uow.edu.au/index.html> The problem is they are not achieving or addressing objectives nor will they with their gross misrepresentations of the dangers of electromagnetic radiation. This Center for Research hasn't been informed that causation linking the RF EMFs to adverse health effects has been lectured for Continuing Medical Education Credits required for ongoing medical licensing. That means it is medical education now and not just opinion. People reading this need to know that in order for the RF EMFs of WiFi to hurt you, they have to hit you AND exposure codes want exposure to be avoided because it triggers nerves. The nervous, hormonal and immune systems work together so are all compromised when exposed to the WiFi RF EMFs. The Specific Absorption Rate test used for limits of human exposure ADMIT they are inducing currents. Inducing currents means you increase voltage in cells. An increase of .2 millionths of a volt changes White Blood Cells. Do you know how people are hit by the WiFi RF EMFs? The Specific Absorption Rate Test didn't include or consider the routers bathing the classroom with everyone in it. Professor Croft's background includes Psychology and RF EMF interaction with humans but they left out critical electrical/biological/neurological as well as other information. Keep it simple, engineers and industry states that if a microwave is leaking or you are inside the microwave it is dangerous. Australia needs to understand the SAR test left out the routers as well as all bioelectrical information or interaction. This is an electrical reason we wire the world. As electrical professionals there are real reasons we wire the world and wireless can be extremely dangerous. That is the reason Government of Canada, Provincial Governments and Industry Canada certified one professional for utilizing electricity. When we say duck, run, stop, no, we have to listen or there could be loss of life and production. Here is a news and letter provided to Elected Officials in Washington State at their request and specific to WiFi liability in their schools. Professor Croft needs to understand people bathed in the EMF are not just sensitive, they are being subtly electrocuted. The name of the test used for the limits of human exposure is specific to absorption of EMFs inducing currents. IEEE should be very embarrassed leaving out the frequencies and bioelectrical information associated with human interaction with WiFi RF EMFs. It is scientifically shameful to hear Professor Rodney Croft from Center For Electromagnetic Bioeffects Research and I say it without malice. Sciences compliment each other and professionals should never speak over their area of expertise. This Episode is the perfect example of what happens when professionals across the board don't do their jobs including the media producing the episode. Jemena are still behaving like bastard bullies and trying to force these accursed "AMI meters" upon customers. These devices are not meters at all, they are radiation emitting radio transmitter devices. There is a metrology component in the device which is a very minor component in the big scheme of things. And Jemena are well aware that some of their customers have been made very very sick by their accursed device. They are just bastard bullies that need to be jailed. Apologies for the harshness but it is more than warranted.

Bill Nolan · 1 year ago

Read the Bio initiative report and check the facts for yourselves.

Rosemary Trudeau · 1 year ago

How can this be forced on our children, grandchildren, old people, disabled, pregnant women, etc? It is against human rights and must be stopped.

Rosemary Trudeau · 1 year ago

---

We need to stop rushing headlong into these wireless technologies which have not been proven to be safe.

Rosemary Trudeau · 1 year ago

A smart meter sensitised us to Wi-Fi, so now, having moved interstate to get away from smart meters in Victoria, we are being made sick from neighbours' Wi-Fi and 4G. Didn't have this problem prior to the smart meter.
